

VITILIGO COVER

EST. 2004

VITILIGO COVER USE INSTRUCTIONS

Preparation: If your skin is very dry and/or flakey apply a regular lotion to your body for a few days prior to applying Vitiligo Cover lotion, so your skin is soft and healthy for it to give optimal results.

Shower using an exfoliating scrub or loofah and dry off thoroughly before applying the Vitiligo Cover lotion. (If you skip this first step, you will not attain the desired results of the lotion.)

For best results use the lotion over the entire body or at least the whole appendage where the vitiligo is located. However, if you'd like to apply the lotion only to a particular white patch, be sure to use the edge of a washcloth to gently smooth around the edges so as to wipe any lotion off the pigmented skin.

Body Application Tips

Arms, Legs, Torso

Apply a light layer of Vitiligo Cover lotion to the whole area. Pay special attention to blend the lotion over shoulders and down arms ending at the wrist. Keep arms bent so the lotion distributes evenly over elbows. Do the same for the knees.

Face

Apply a very light coat to your face, being sure to fully blend onto your neck, blending onto your shoulders. I like to mix a bit of regular face crème with the Vitiligo Cover, so it is a lighter color when developed.

For fair skin, mix 50/50 with your favorite moisturizing lotion to dilute the formula.

LET Vitiligo Cover Lotion DO THE WORK
6-8 hours the vitiligo patches will blend
with your natural skin tone.

For best results apply the lotion before
bed if you use darker colored sheets or,
simply wait 15 minutes after application
before dressing.

Do not get water or sweat on the areas
while the color is developing.

Hands

Rinse off hands with warm water and soap. A scrub brush will take off any excess from your palms and assure that nails aren't stained.

Be sure to dry hands thoroughly with a dark towel before applying the lotion.

Apply a very small amount of lotion to the backs of hands and blend evenly with the applicator sponge. Lightly dab the knuckles with a towel after application to remove excess lotion.

It would be most unusual for the lotion to not work at all.

Sometimes **certain patches of vitiligo can be more resistant to holding the color,** but by adding layers it will work.

Let's create a test patch!

1. Apply a small amount of Vitiligo Cover lotion to just the white patch...perhaps use the sponge that was included with your package if the area is not too big.
2. Let the color develop for 8 hours, being sure to not get the area wet.
3. Look at the color. If it is not dark enough, add another light layer and wait 8 hours.
4. If the color looks good, you know that 2 layers is what you want with each application. (continue with a 3rd layer, if needed)
5. Next time you are going to apply the lotion elsewhere, simply add the first light layer, wait about 10 minutes for that to be absorbed, then apply the second light layer and let both fully develop for 8 hours.
